MANAC'S LEGEND SERIES PLATFORMS

Our mission is to provide our customers with the highest quality products at a competitive price. That is what our new Legend Series does. We have put together specifications that meet the requirements of our customers. We have paid attention to details to ensure that our trailers are simple and functional. We have made sure that these new models offer the balance of durability and light weight that our customers demand. We feel that these platform trailers offer the best value in the market today.

STANDARD FEATURES

Balanced Centerbeams

Benefit: Our centerbeams offer a balance of high strength and low weight. This is done by the use of high strength steel flanges. The variable thickness plasma-cut web is carefully configured in terms of nose depth, center depth and rear depth for maximum capacity with minimum weight. These pieces are machine double welded for long lasting dependability.

A Most Efficient Structure

Benefit: A unique "floating upper coupler" structure of steel improves strength and longevity. The coupler plate assembly is plug welded to the main beam web to provide the strongest connection and stiffen the beam while allowing centerbeams to articulate independently.

Cross Bracing

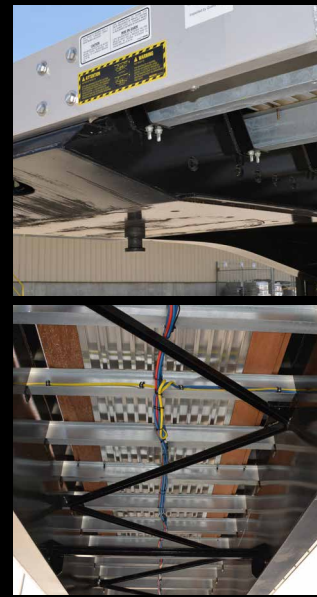

Benefit: Full-length W-shaped braces between beams for added strength, efficient load distribution and long term superior road performance.

Aluminum Cap Front Rail

Benefit: Heavy-duty extruded aluminum sill caps on the floorboards for improved strength, fit and finish. Beveled corners offer marker light protection.

Distinctive – Yet Functional

Benefit: The 13" deep, 9 gauge galvanized section provides for good protection of the rear lights. The easy-to-replace, bolt-on galvanized bumper assembly attaches directly to the centerbeam. The recessed face of the 4" x4" vertical bumper tube offers protection for DOT reflective tape.

STANDARD FEATURES

BUILT RUGGED, BUILT LIGHT

Corrosion Proof

Benefit: Galvanized high-strength, lightweight 4" steel I-beam crossmembers have been developed to fight off rust and corrosion. Special aluminum I-beam crossmembers are available as an additional weight savings feature.

Strong, Durable Floor

Benefit: Heavy-duty aluminum inverted "T" extrusion for light weight, durability and long term peak performance.

Rugged Two-Speed Supports

Benefit: Self leveling foot, lifting capacity 50,000 lbs. Static load capacity 160,000 lbs. Superior E-coating for outstanding corrosion protection.

Siderails with Rated Anchor Points

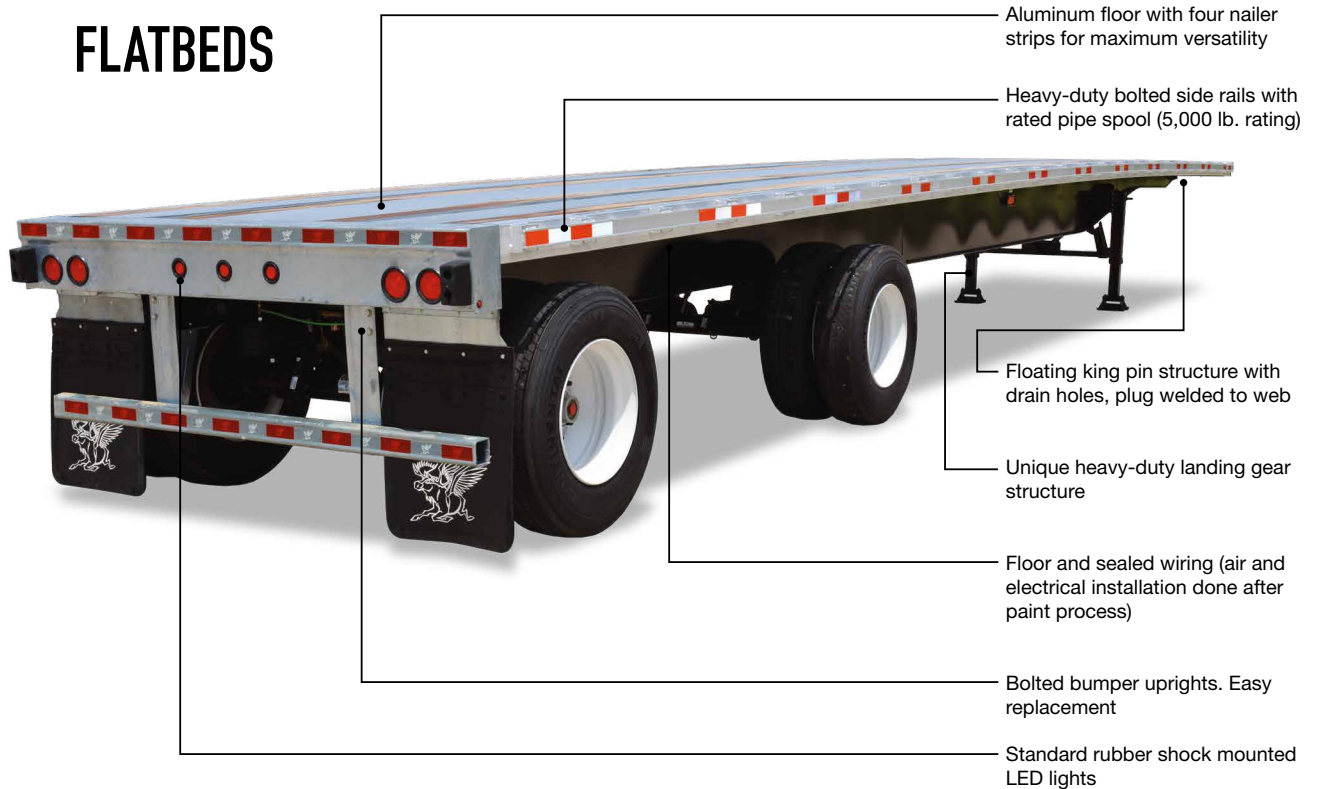

Benefit: Heavy-duty extruded aluminum rated side box made of tubing allows stronger connection with the side rail. Bolted side rails with rated anchor point solid spool spacer.

Second-to-None Finishing

Benefit: Fully automatic shot blast process, high quality epoxy primer and acrylic urethane top coat. Wheels: white powder coat. DOT compliant conspicuity striping.
